### **Algae food and feed | ALGAE WORLD NEWS**

Researchers from the Flanders Research Institute for Agriculture, Fisheries and Food (ILVO) are conducting a study on how residual flows from algae production for human consumption can deliver value in chicken feed. Many algae species have a high protein content and can be beneficial for the fatty acid and amino acid composition of the eggs.

### **AllAboutFeed - Can algae residuals be used in chicken feed?**

Algae produced on the farm also can be processed into livestock feed, Carr notes. For example, farmers who are raising shrimp or catfish can use algae that are rich in protein and oil to replace fish meal in aquaculture diets.

### **Algae: Important for Food | Successful Farming**

First, algae is not used as a primary food source for humans, meaning that it can be used solely for fuel and there would be little impact in the food industry. Second, many of the waste-product extracts produced during the processing of algae for biofuel can be used as a sufficient animal feed.

### **Algae fuel - Wikipedia**

Most of the raw materials currently used for animal feed products are higher plants as corn, soybeans, sorghum, oats, and barley. Beside the nutritional improvement that microalgae incorporation in feeds versus higher plants may bring to animals health, they are the only biomass material that allows production with daily harvest all year round.

### **A4F - microAlgae for Food, Feed, Fuel and Fibre**
