Some recipes, for example, appear to be paraphrased from well-known chefs.

Biology Population Dynamics Study Guide

Population Dynamics. Population dynamics is the study of the size and age composition of populations. This simulation produces data for population size over time for three different species in a simple food chain; a plant, a herbivore, and a predator. The starting populations, as well as the reproductive rates and the amount of food needed by the herbivore and predator, can be controlled by the user.
