Cognitive Rehabilitation Attention And Neglect | id ...

To assess whether cognitive rehabilitation improves functional independence, neglect (as measured using standardised assessments), destination on discharge, falls, balance, depression/anxiety and quality of life in stroke patients with neglect measured immediately post-intervention and at longer-term follow-up; and to determine which types of interventions are effective and whether cognitive rehabilitation is more effective than standard care or an attention control.

Cognitive rehabilitation for spatial neglect following stroke

(2020). Comprehensive cognitive training improves attention and memory in patients with severe or moderate traumatic brain injury. Applied Neuropsychology: Adult: Vol. 27, No. 6, pp. 570-579.

Comprehensive cognitive training improves attention and ...

Background: Attention deficits are common after acquired brain injury (ABI) and adversely impact academic, vocational and social outcomes. The role of cognitive interventions in post-ABI attention rehabilitation remains unclear. Objective: To evaluate effectiveness of cognitive interventions in treating attention deficits following ABI and to explore differences in treatment effect between ABI ...

Cognitive remediation of attention deficits following ...

Cognitive rehabilitation is a therapeutic approach designed to improve cognitive functioning after central nervous system insult. It includes an assembly of therapy methods that retrain or alleviate problems caused by deficits in attention, visual processing, language, memory, reasoning, problem solving and executive functions.

Cognitive Rehabilitation

AUTHORS' CONCLUSIONS: The effectiveness of cognitive rehabilitation interventions for reducing the disabling effects of neglect and increasing independence remains unproven. As a consequence, no...

Cognitive rehabilitation for spatial neglect following stroke.

Cognitive rehabilitation for spatial neglect following stroke The benefit of cognitive rehabilitation (therapy) for unilateral spatial neglect, a condition that can affect stroke survivors, is unclear. Unilateral spatial neglect is a condition that reduces a person's ability to look, listen or make movements in one half of their environment.

Cognitive rehabilitation for spatial neglect following ...

To assess whether cognitive rehabilitation improves functional independence, neglect (as measured using standardised assessments), destination on discharge, falls, balance, depression/anxiety and quality of life in stroke patients with neglect measured immediately post-intervention and at longer-term follow-up; and to determine which types of interventions are effective and whether cognitive rehabilitation is more effective than standard care or an attention control.

Cognitive rehabilitation for spatial neglect following ...

BACKGROUND: Disorders of attention are common following stroke, reducing quality of life and limiting rehabilitation. OBJECTIVE: To determine if cognitive rehabilitation can improve attention and functional outcomes in stroke survivors with attention

Can cognitive rehabilitation improve attention deficits ...

Attention deficits are among the most common cognitive impairments observed after experiencing stroke. However, a very limited number of studies have investigated the effectiveness of interventions that specifically focus on the rehabilitation of attention deficits among subjects with impaired attention. Although several interventions have included the use of computerized programs to provide ...
