Problem The tide in Bay of Fundy rises and falls every 13 hours. The depth of the water at a certain point in the bay is modeled by a function $d = 5 \sin(2\pi/13)t + 9$, where t is time in hours and d is depth in meters. Find the depth at $t = 13/4$ (high tide) and $t = 39/4$ (low tide).. The depth of the high tide is 15 meters and the depth of the low tide is 3 meters.

Solution Preview. This material may consist of step-by-step explanations on how to solve a problem or examples of proper writing, including the use of citations, references, bibliographies, and formatting. This material is made available for the sole purpose of studying and learning - misuse is strictly forbidden.

Answer: Surveying Problems - 24HourAnswers

The problems and solutions are excellent. This is a must add to your study material. The problems given in these practice exams were essential in me passing the exam from the first take. The computer based part is the closest you get to the feel of the actual exam. I would say 40% of the problems in this book were similar to ones in the actual exam.

Surveying Practice Exams and Solutions for California ...

Surveying (or land surveying) software assists in the process of evaluating a 3D landscape to determine the angles and distances between a series of points. Measuring the positioning of these points is typically used to establish maps and boundaries for buildings and other subterranean civic projects.
