### Enterprise Java™ with UML™ - Free

Enterprise Architect allows Java Binaries (JAR files) to be reverse engineered, creating the required model packages and diagrams during the import process. Developers can model UML classes including attributes and operations, as well as dependencies to other classes. Enterprise Architect can then generate the class into a new file which contains the class declarations and attributes, the import statements required, the declarations required for the methods created, and javadoc ...

### C. T. Arrington Enterprise Java with UML - World of Digitals

Listing 4: Java code of class Order generated by the code generation template in Listing 1 . If you look carefully at the template in Listing 1, you will realize that it does not know anything about Enterprise Architect. Instead, it handles instances of the UML metamodel which is available in Eclipse thanks to the Eclipse UML 2 project. The missing connection between Enterprise Architect and UML ...

### How to Create Project-specific Code ... - Enterprise Architect

I'm looking for two things really: One is how do I model generic java classes if i were doing it with pen and paper. Craig Larman's book Applying UML and Patterns 3e has instructor slides with the Figures from the book. The following is from Figure 15.5: Secondly, what uml tools out there support generic classes/interfaces.

### java - UML Class Diagram and Generics - Stack Overflow

Enterprise Architect can also generate code from a number of behavioral models, including StateMachine, Sequence and Activity diagrams. There is a highly flexible template mechanism that allows the engineer to completely tailor the way that source code is generated, including the comment headers in methods and the Collection Classes that are used.

### Generate Source Code | Enterprise Architect User Guide

Java Modeling in Color with UML: Enterprise Components and Process delivers 61 components, 283 classes, 46 interfaces, 671 attributes, 1139 methods, and 65 interaction sequences. On top of all of this, Coad, Lefebvre, and De Luca present Feature-Driven Development (FDD), the process for getting the most out of your Java modeling and development ...
