The attached diagram may help some users with wiring this unit with a remote pressure switch. The fuse can be 2 to 5A and is necessary to protect the wires to the pressure switch that exit the starter enclosure. The small 16AWG control wires would not be safe when connected directly to a 50-60A breaker that is required for a 5HP motor.

The wiring in a non plug-in switch is brought in through the conduit entrance at the bottom of the body/receptacle. The wiring terminals are accessible through the front of the switch by removing a cover plate. The cover plate is attached by two screws and contains a gasket on one side to provide a tight seal against the sensor.

POWERTEC 71355 Magnetic On-Off Switch 110V This on off power switch was designed to perform as an emergency safeguard, protecting you and your machines from accidental startup and power interruptions. It's a push button power switch that can be conveniently positioned and utilized with a wide assortment of woodworking and power tool equipment.

POWERTEC 71355 Magnetic On-Off Switch, 110V - - Amazon.com

When the magnet is first turned on, the switch wire is heated above its transition temperature, so it is resistive. Since the winding itself has no resistance, no current flows through the switch wire. To go to persistent mode, the supply current is adjusted until the desired magnetic field is obtained, then the heater is turned off.
