The SUBARU automatic transmission dropping resistor is connected in parallel with duty solenoid A. Duty solenoid A regulates the Subaru automatic transmission fluid line pressure. Like most of the transmission solenoids, duty solenoid A's duty cycle is varied by the transmission control unit (TCU) to control the line pressure.

If the solenoid is the problem you'll usually see the circuit open when it gets hot. If the solenoid circuit does not go to an open circuit when hot you need to start checking the wire to the computer and the solenoid connections, which means getting into the unit. The 1st generation of Subaru CVT has a tag with TR690 above the starter.
