The simulation is run as a board game in teams playing the roles of retailers, wholesalers, distributors, and brewers of beer. As the backlog for orders increase, players order too much inventory, forcing their teammates into severe backlogs further down the supply chain. The game can be emotionally intense.

Our Beer Game is a virtual simulation that closely mimics the original Beer distribution game developed by MIT Professor Jay Forrester in the 1960s. This original game was created to illustrate the dynamics of Supply Chains. Like the original, the game has four players - the beer retailer, the wholesaler, the distributor, and the manufacturer.

The Beer Production-Distribution Game

The Beer Game was developed to introduce students, managers and executives to concepts of system dynamics. The purpose of the game is to illustrate the key principle that structure produces behavior. Players experience the pressures of playing a role in a complex system and can see long range effects during the course of the game.
