The only way to properly repair a tire is to demount it from the rim so it can be inspected on the inside, remove the damaged material, fill the void with rubber, and seal the innerliner with a repair unit. A plug by itself or a patch by itself is not an acceptable repair because the plug does not permanently seal the innerliner and the patch does not fill the void left by the penetrating object, which allows water to enter the body of the tire and start corroding the steel belts.
