Workflow Of Data Analysis Using

A workflow of data analysis is a process for managing all aspects of data analysis. Planning, documenting, and organizing your work; cleaning the data; creating, renaming, and verifying variables; performing and presenting statistical analyses; producing replicable results; and archiving what you have done are all integral parts of your workflow.

The Data Science Workflow - Four Years Remaining

Documenting the workflow process is critical to project managers, professionals, and researchers alike because it offers a roadmap for the future, increases transparency and reproducibility, and allows for data analysis within the data lifecycle. Experts in the field recommend clearly capturing how the data is analyzed and transformed.
